If it be not a young Calamita or Hyla, it will be a Hylella near the E. carnal type. Gfrather states that Hylorana erythraea has been found at the extreme northern pointr-Cape York--of Australia. If so, the case is parallel to the ooeurrence of the Raniform Runulu in northern South America. t See Dr. H. Allen, Proceed. A. N. 8., Philada., 186T. and approaching in many ways the Insectivora; the last imitating, at least, a Rodent. There are also other reasons for the inferiority of South America. Its deer, which are few, are those which never produce more than the dague, or the first horn of the northern Cervus, or those which never get beyond the fourth step in the development of the lower group ofK. Nearctica. The Loricariidae...
