Reviews

This kind of publication is every little thing and taught me to looking ahead of time and a lot more. It is packed with wisdom and knowledge Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Ida Herman)

AIR POLLUTION MODELING AND ITS APPLICATION VII

Springer. Paperback. Book Condition: New. Paperback. 620 pages. Dimensions: 11.0in. x 8.3in. x 1.4in. Air pollution remains a major environmental issue despite many years of study and much legislative control. In recent times, pollution on a global scale has become of particular concern. The gradually changing concentration of trace gases in the global troposphere due to man's activity is becoming a matter of serious concern. No scientist would dare to predict in detail the consequences of this gradual change due to its immense complexity involving social and economic factors and near countless chemical and physical cycles in our biosphere. In this chain of processes, the transport of pollution is an important factor, but only a factor. Therefore, I would like to emphasize that the modelling of atmospheric transport is becoming more and more an activity which fits into larger frameworks and can no longer be exercised as a single step, which bridges the gap between emissions and policy measures. This is also reflected in the topics and papers which were presented at this conference. The topics were: - emission inventories for and source treatment in air pollution dispersion models; - modelling of accidental releases; - regional and global scale dispersion modelling; including boundary layer-free troposphere exchange processes and subgrid scale parameterisations; - model verification and policy implications; - new developments in dispersion modelling and theory. 56 papers were presented in these sections. While many posters were discussed in a special session. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
