This is a story of biological exploration in the cold clear water of western Wisconsin's Kinnickinnic River. The unique nature of the stream-its high quality water, its insect and crustacean inhabitants, and its health and preservation-are major themes running through the thirty-two essays that comprise the book. It describes how an aquatic insect survey was conceived and carried out to document prevalent river residents in time and space. In this section, too, is discussion of river invertebrate diversity and how we classify and name these animals. Essays making up Part II describe the lives of the stream's common macroinvertebrate residents, among them a...
