Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1889 Excerpt: .middle point of the median of a trapezoid, and cutting the two bases, divides the trapezoid into two equivalent parts. Is the theorem also true if the line cuts the legs instead of the bases? 6. In every trapezoid the triangle which has for base one of the legs of the trapezoid, and for vertex the middle point of the opposite side, is equivalent to one-half of the trapezoid. 7. The sum of the areas of two opposite triangles, formed by joining a point within a parallelogram to the four vertices, is equal to one-half of the area of the parallelogram. 8. The area of a trapezoid is equal to the product of one of its legs, and the distance of this leg from the middle point of the opposite side. 9. The triangle whose vertices are the middle points of the sides of a given triangle is equivalent to one-fourth of the given triangle. 10. The figure whose vertices are the middle points of the sides of any quadrilateral is a parallelogram, and is equivalent to one-half of the quadrilateral. 11. Mutually equiangular parallelograms have the same ratio as the products of two adjacent sides. 12. Similar polygons are to each other as the squares of two homologous diagonals. 13. If ABC is a right triangle, C the vertex of the right angle, BD a line cutting AC in D, then $BI^2 + AC = AR + DC$ 14. If upon the sides of a...
