If each of two unequal magnitudes can be expressed numerically to any required degree of nearness in reference to a common unit magnitude their difference may be expressed numerically to any required degree of nearness in reference to that unit magnitude. In reference to one unit magnitude let the greater of two unequal magnitudes be not less than $a-K$ and not greater than aK and the less not less than $a-K$ and not greater than aK where a and K are numbers of which both K and $a-K$ may be less than any given number however small. Then (art. 242) $a-K$ may be each taken so small that each of the numbers $a-K$ is greater than each of the numbers $a-K$. Hence (art. 103) taking K each thus small the difference of the unequal magnitudes in reference to the unit magnitude not $a-K-(a!K)$ and not $aK-(a1-K)$ and . . . not $a-(kk)$ and not $a-aKk$. And Kk may be made less than any given number k however small by taking K each less than k . The difference of the unequal magnitudes therefore may in this way be expressed numerically to any sought degree of nearness in reference to the unit magnitude. 294. Def The operation by which when numerical quantities a b expressing two unequal magnitudes in reference to a unit magnitude can be found near enough the numerical quantity may be found to any required degree...
