AlGaIn/GaN Heterostructures: Fabrication and Electrical Characterization

By Michael Awaah

LAP Lambert Acad. Publ. Jun 2010, 2010. Taschenbuch. Book Condition: Neu. 220x150x9 mm. Neuwere - Group III-nitrides, in particular GaN and its heterostructures with AlGaIn, have some unique electronic material properties that make these material systems almost ideally suited for the fabrication of a number of high-performance electronic and optoelectronic devices. A study of MBE grown Al_{0.2}Ga_{0.8}N/GaN heterostructures was conducted. Rectifying and ohmic contacts were fabricated for electrical characterization of the heterostructure. These contacts were fabricated by sputter deposition of metal films. A multi-layer Ti/Al/Ni/Au (15/60/35/50nm) metallization and subsequent anneal was employed to form ohmic contacts. A contact resistivity of 2.0×10^{-3} Ohm.cm² was obtained. Though this value was high but was expected of unintentionally doped n/n Ni Al_{0.2}Ga_{0.8}N/GaN unipolar heterostructure. Rectifying contacts were obtained by depositing Ni on the AlGaIn/GaN film, overcoated with Au (Ni/Au, 20/180nm). Fabricated HEMT devices exhibited transistor behavior with transconductance values between of 1.0 and 2.5 mS; however, saturation was not observed. A drift mobility ~ 130 cm²/V.s was estimated from the calculated transconductance. 156 pp. Englisch.

Reviews

An incredibly wonderful ebook with lucid and perfect answers. It is written in easy words instead of difficult to understand. It has been printed in an exceptionally easy way in fact it is simply following I finished reading this publication in which really modified me, modify the way I think.

-- **Mr. Keyshawn Weimann**

This book will be worth buying. Better than never, though I am quite late in starting reading this one. You may like how the blogger composed this publication.
