

Mathematical Questions and Solutions in Continuation of the Mathematical Columns of The Educational Times Volume 62

Filesize: 8.96 MB

Reviews

Without doubt, this is actually the very best function by any article writer. it was writtern quite flawlessly and valuable. Once you begin to read the book, it is extremely difficult to leave it before concluding.

(Prof. Isobel Heller MD)

MATHEMATICAL QUESTIONS AND SOLUTIONS IN CONTINUATION OF THE MATHEMATICAL COLUMNS OF THE EDUCATIONAL TIMES VOLUME 62

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1895 Excerpt: .Professor Bhattacharya; and others. Taking OP for initial line, let $POQ = 8$, $QOR = p$; then the sides of the triangle, and area S, can be immediately obtained. We require the average value then 12284. (R-Chartres.)--BC is a fixed chord of a circle subtending an angle of 120° at the centre O: show that (1) for any position of A on the larger arc the ortho-centre, in-centre, circum-centre, Fermat's point, and another point Z of the triangle ABC lie on the arc BOC; also find (2) Z, the isogonal conjugate of Z, and the value of $2(ZA) \cdot 2(ZA)$, without restricting A to the circle; and (3) the locus of the centre of the nine-point circle in (1), and, if the involute of this curve roll on a straight line, find the locus of the mid-point of BC. Solution by Professor Longchamps; the Proposer; and others. BC subtends at the ortho-centre, in-centre, circum-centre, Fermat's point F, and its isogonal conjugate Z, $180-A$, $90 + iA$, $2A$, 120 , and $A + 60$, each of which = 120 , if $A = 60$. By the similar triangles AZB, AKC, $ZA/c = 4/AK$, or $ZA \cdot s(FA) = 4e$; $-S(ZA) \cdot 2(FA) = 2(-4)$. Since the radius of the nine-point circle = $R = OD = \text{constant}$, therefore the locus of its centre is the circle having ODH for diameter. If the involute of this circle roll on a straight line LM, then LM equals sub-normal of the roulette described...
