

Dynamics of Manipulation Robots

By V. Potkonjak

Springer Feb 2012, 2012. Taschenbuch. Book Condition: Neu. 24.4x17x cm. This item is printed on demand - Print on Demand Neuware - This monograph represents the first book of the series entitled 'SCIENTIFIC FUNDAMENTALS OF ROBOTICS'. The aim of this monograph is to approach the dynamics of active mechanisms from the standpoint of its application to the synthesis of complex motion and computer-aided design of manipulation mechanisms with some optimal performances. The rapid development of a new class of mechanisms, which may be referred to as active mechanisms, contributed to their application in various environments (from underwater to cosmic). Because of some specific features, these mechanisms require very careful description, both in a mechanical sense (kinematic and dynamic) and in the synthesis of algorithms for precise tracking of the above motion under insufficiently defined operating conditions. Having also in mind the need for a very fast (even real-time) calculation of system dynamics and for eliminating, in principle, the errors made when forming mathematical models 'by hand' this monograph will primarily present methods for automatic formulation of dynamic equations of motion of active spatial mechanisms. Apart from these computer-oriented methods, mention will be made...

Reviews

Unquestionably, this is the greatest operate by any article writer. I could comprehend everything out of this written ebook. Your way of life span will be transform as soon as you total reading this book.

-- **Andy Erdman**

A top quality publication along with the typeface applied was exciting to read through. It can be rally interesting through reading through time. Your life period will be enhance once you full reading this article book.

-- **Prof. Demond McClure**
